Decor range rates apply to Metallic PVC and ABS edging. Finish: Satin 02. Matching: Velvet, Pearl, Naturale, and Satin finishes.

<b>Materials Guide</b>	
<b>Thermo Edgings</b>	<p><b>PVC</b> PVC is a solid and robust material with high dimensional stability. It is highly resistant to impact, abrasion, chemicals, and UV light, ensuring long tool life and easy machining.</p> <p><b>ABS</b> ABS shares many of the characteristics of PVC, but it is lighter (lower density) and does not include chlorine in its composition. ABS edgings are 100% recyclable and thermally disposable.</p> <p><b>PP (Laser, NIR, Hot-Air, Hyfuse, Air-Force)</b> PP edging is produced from a thermoplastic material named Polypropylene. PP is chemically inert, very light, and flexible, facilitating good processing. It is excellent for small radius applications.</p> <p>All printed decors are produced using an environmentally-friendly, VOC-free, UV paint technology that offers excellent UV and scratch resistance. PROADEC edgings are produced free of plasticisers and lead.</p>
<b>Tekton - Timber Veneer Edgings</b>	<p><b>Natural &amp; Recon</b> A multilayer construction (2mm) with paired matching layers, micro/finger-jointed in a soft wave-like pattern, ensures the highest possible flexibility. The front face is pre-sanded with 180-grit sandpaper.</p> <p><b>3D</b> Offer textured surfaces that mimic rustic solid wood beams and the rough-cut look of band sawn lumber.</p> <p><b>Prefinished</b> UV-cured finishing systems (based on acrylic resin) for extra strength. We use high-quality non-woven fabric, color-matched to the wood species, and applied with PVAc glue (Polyvinyl acetate). The gloss range is approximately 15-20°.</p>
